

MCH-07: Backup, Upgrade, and Disaster Recovery

Series: MCH — Managed Cluster Health | **Notebook:** 7 of 8 | **Created:** September 2026 | **Last Updated:** 09/25/2026

Overview

Status: Outline — this notebook's content is in development. The sections below list what it will cover.

Layer 5 of the health model — backups, version currency, and surviving a site loss. Read MCH-01 first for the cluster architecture and the five-layer health model this notebook builds on.

Table of Contents

1. [Backup Scope and Schedule](#)
 2. [Restore Readiness](#)
 3. [Upgrades](#)
 4. [Version Support](#)
 5. [Premium High Availability and Failover](#)
 6. [Summary and Next Steps](#)
-

Prerequisites

Requirement	Details
Dynatrace deployment	A self-hosted Dynatrace Managed cluster. Nothing in this series applies to Dynatrace SaaS.
Access	Cluster Management Console (CMC) administrator access; for the Cluster API, a cluster API token with the <code>ServiceProviderAPI</code> permission
Query language	None. Managed has no Grail, so this series has no DQL cells — every check is a CMC view, a cluster event, or a Cluster API call
Version basis	Written against the Managed documentation read 09/25/2026, when 1.342 – 1.346 were the generally supported releases

1. Backup Scope and Schedule

Planned content:

- What is and isn't backed up — transaction storage is not
- Daily Cassandra snapshot, incremental Elasticsearch snapshots

2. Restore Readiness

Planned content:

- Testing a restore before you need one

3. Upgrades

Planned content:

- Automatic downloads, the 24-hour wait, one node at a time, the divisible-by-4 skip rule, <3-node downtime

4. Version Support

Planned content:

- Reading the Managed release table and the four-week cadence

5. Premium High Availability and Failover

Planned content:

- Two data centers, six-node minimum, automatic DC failover

6. Summary and Next Steps

Content in development. For the health model and the full series lineup, see MCH-01.
