

MCH-99: Best Practice Summary and Health-Check Checklist

Series: MCH — Managed Cluster Health | **Notebook:** 8 of 8 | **Created:** September 2026 | **Last Updated:** 09/25/2026

Overview

Status: Outline — this notebook's content is in development. The sections below list what it will cover.

The series in one page — the five-layer checklist, the day-one events, and the recurring health review. Read MCH-01 first for the cluster architecture and the five-layer health model this notebook builds on.

Table of Contents

1. [Five-Layer Health-Check Checklist](#)
 2. [Daily, Weekly and Monthly Reviews](#)
 3. [Anti-Patterns](#)
 4. [Summary and Next Steps](#)
-

Prerequisites

Requirement	Details
Dynatrace deployment	A self-hosted Dynatrace Managed cluster. Nothing in this series applies to Dynatrace SaaS.
Access	Cluster Management Console (CMC) administrator access; for the Cluster API, a cluster API token with the <code>ServiceProviderAPI</code> permission
Query language	None. Managed has no Grail, so this series has no DQL cells — every check is a CMC view, a cluster event, or a Cluster API call
Version basis	Written against the Managed documentation read 09/25/2026, when 1.342 – 1.346 were the generally supported releases

1. Five-Layer Health-Check Checklist

Planned content:

- One checklist item per signal, grouped by layer

2. Daily, Weekly and Monthly Reviews

Planned content:

- What to look at, and how often

3. Anti-Patterns

Planned content:

- Unread notification mailboxes, uneven node disks, NFS for live data, running at capacity

4. Summary and Next Steps

Content in development. For the health model and the full series lineup, see MCH-01.
