

MCH-05: Cluster ActiveGates and Mission Control Connectivity

Series: MCH — Managed Cluster Health | **Notebook:** 5 of 8 | **Created:** September 2026 | **Last Updated:** 09/25/2026

Overview

Status: Outline — this notebook's content is in development. The sections below list what it will cover.

Layer 4 of the health model — whether agents can reach the cluster and the cluster can reach Mission Control. Read MCH-01 first for the cluster architecture and the five-layer health model this notebook builds on.

Table of Contents

1. [The Agent Traffic Path](#)
 2. [The Mission Control Link](#)
 3. [What Breaks When Mission Control Is Unreachable](#)
 4. [Connectivity Events](#)
 5. [Summary and Next Steps](#)
-

Prerequisites

Requirement	Details
Dynatrace deployment	A self-hosted Dynatrace Managed cluster. Nothing in this series applies to Dynatrace SaaS.
Access	Cluster Management Console (CMC) administrator access; for the Cluster API, a cluster API token with the <code>ServiceProviderAPI</code> permission
Query language	None. Managed has no Grail, so this series has no DQL cells — every check is a CMC view, a cluster event, or a Cluster API call
Version basis	Written against the Managed documentation read 09/25/2026, when 1.342 – 1.346 were the generally supported releases

1. The Agent Traffic Path

Planned content:

- NGINX redirection, embedded vs. separate cluster ActiveGates, load balancers

2. The Mission Control Link

Planned content:

- Ports and hosts (HTTPS/WSS on 443), *Check Mission Control connection*

3. What Breaks When Mission Control Is Unreachable

Planned content:

- The 14-day overage rule, updates, DPS usage reporting, offline licenses

4. Connectivity Events

Planned content:

- *Lack of connection to Dynatrace Mission Control, node can't receive OneAgent traffic*

5. Summary and Next Steps

Content in development. For the health model and the full series lineup, see MCH-01.
